

HO EMD E8/9 Grille Replacement

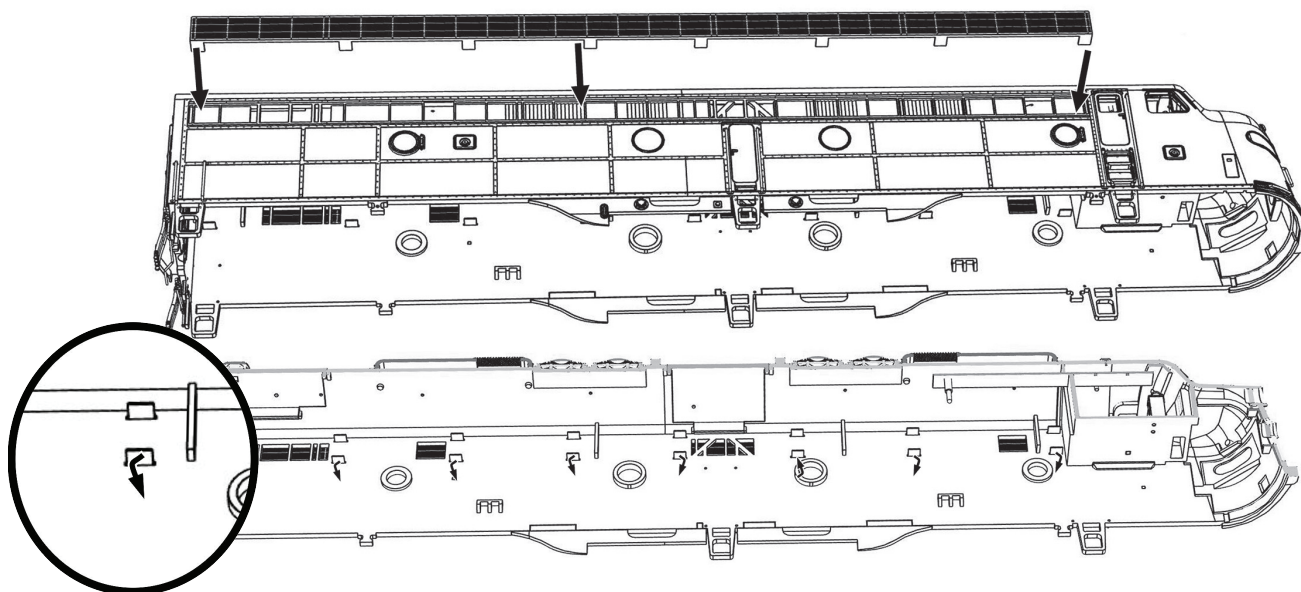

Replacing your grilles on your E9/9 is a fairly straightforward process.

To start, remove the body from the chassis by removing the coupler box screws then sliding the coupler boxes out. Spread the body side slightly to disengage the small clips inside and pull up.

The factory-installed grilles are held in place by several tabs which are bent over inside the shell. To remove them, simply bend the tabs up straight and then push them out. Carefully inserting a hobby knife blade between the body and grille on the outside, then prying up may help.

Now insert the tabs on the new grilles into the slots in the body shell, then bend them over on the inside using a screwdriver.

Clip the body back down onto the chassis, re-install the coupler boxes and you're done!
